

Gabriela Martini

Personal Information:

Name:	Gabriela Martini
Email:	Gabimartini@hotmail.com
Phone:	07568207598

Professional Profile:

Creative, self-motivated, self-taught and problem solving focused. I have been learning coding, focusing on JavaScript, since march. In September I started to be part of WTB- Bristol. I'm looking for a Junior position in a company where I can challenge myself and develop my skills in coding. I'm also looking for a job where I can contribute with my design software skills and my creativity to solve problems. Experience with Photoshop, Illustrator, Corel Draw, Arts, E-commerce, Web Analytic. Intermediate knowledge in HTML and CSS. I have been working as a Fashion and Textile Designer for the last 5 years and as an entrepreneur for the last 3 years.

Interest:

Argile, PHP, Laravel, JavaScript, React, Angular, Vue, Redux, Python, Machine Learning, Data Science, MySQL, SQL, Mobile-App, C#, MVC, ASP.Net...

Project:

- ❖ **XBar-Chart:** Web app for industrial application. Xbar-R Charts is a useful tool to maintain processes under statistical control. For this project I used node.js, express for and NeDb with database. For the front-end, I used JavaScript, HTML and For an asynchronous request, I chose Ajax.
- ❖ **Website:** For this front-end Website, I used React, and for a simple script I used JQuery.
- ❖ **Website-Portfolio:** For this website I used React to develop the front-end. For the back-end, I used node.js and express. I chose Axios and nodemail for integration and development of the form contact.
- ❖ **Store-rente-app:** For this webappl used React and react-route. This is a multilanguage app. I created differents interactions with google maps, money converter, localStorage and differents filters.
- ❖ **Website-responsive:** For this website, I used React, Php for contact form, react-route and google maps API. The blog for this website is developed in Wordpress and this responsive website.
- ❖ **Php-MySQL-Login:** This is an app for register and login website, developed with PHP and MySQL.
- ❖ **DropBox:** Clone Dropbox backend. I used ES6 (ES2015) and ES7 (ES2016), Firebase, REST API and Ajax.
- ❖ You can find this and othres projects in my own website www.gabrielamartini.com and in my github(<https://github.com/gabimartini>)
